FOR IMMEDIATE RELEASE

Polar Pioneers Service in Larimore, ND

PARK RIVER, ND – March 4, 2004 – Larimore is becoming more up to speed each day. Polar recently launched High Speed Wireless Internet access in the community. High Speed Internet is not a new service for Polar. However, the technology used in providing the service to Larimore is very new. In fact, Polar is the only company in the United States providing High Speed Internet through a repeater sight on the 700 Mhz Spectrum. There is one other company in the state of Michigan that is providing the service on a main site.

Polar is excited to bring this service to Larimore. They are also proud to implement a new technology, such as this, in rural North Dakota. You hear so much about rural areas being so behind when it comes to technology, but as you can see by this case, that is far from the truth.

“The 700 MHz spectrum will allow us to provide Non-line of sight, or Near-Line of sight (NLOS) High Speed wireless Internet access to areas with lots of trees and obstructions like the Larimore area has,” said Karl Blake, Internet Operations Supervisor for Polar Communications.

Many Internet Service/Telecommunications Providers have been in contact with Polar requesting tours and a visit to our headquarters to learn what is involved with implementing this service to their customers.
