

GIGA CENTER QUICK SETUP GUIDE

Your router has been pre-provisioned by a Polar professional. A sticker with SSID and password have been included.

TO INSTALL:

1 - Locate your ONT (fiber equipment).

2 - The router can be mounted vertical with the stand attached or horizontal. Ensure there is adequate airflow around the device to prevent overheating. Plug a patch cord into the LAN Port 1 of your ONT.

3 - Plug the other end of patch cord to the “ETH-WAN” Port of the router.

4 - Connect to power and press the on/off button to power on.
Wait up to 5 minutes for the router to boot up.

5 - You can now connect devices to the wireless network.
For hardwired applications plug into Ethernet Ports 1-4.
