

# GIGASPIRE QUICK SETUP GUIDE

Your router has been pre-provisioned by a Polar professional. A sticker with SSID and password have been included.

## TO INSTALL:

- 1 - Locate your ONT (fiber equipment).

- 2 - The GigaSpire router must be mounted vertically. Ensure there is adequate airflow around the device to prevent overheating. Plug a patch cord into the **LAN Port 1** or **Ethernet 1 Port** of your ONT.

- 3 - Plug the other end of patch cord to the **WAN Port** of the GigaSpire.

- 4 - Connect to power and press the on/off button to power on. Wait up to 5 minutes for the router to boot up.

- 5 - You can now connect devices to the wireless network. For hardwired applications plug into the **LAN Port** on the GigaSpire.
